Synthesis of new Serine Proteases inhibitors as antifibrinolytic agents

Summary: The aim of the project is the preparation and characterization of a chemical library of substituted 1,2,4 and 1,3,4-oxadiazoles. Recent biological tests, performed in collaboration with the startup Alxerion, have shown that these compounds are endowed with a remarkable antifibrinolytic activity. This project is a collaboration with the Massachusetts Institute of Technology (MIT).

Director: Dr. David Sánchez-García (david.sanchez@iqs.edu)

Laboratory: Supramolecular Chemistry
