Response protocol for a positive case of COVID-19

If any individual, staff member, or student presents Covid-19 symptoms (fever, feeling unwell, shortness of breath, coughing often, loss of smell) while at the IQS campus, they must leave the campus immediately, avoid contact with others, return home, contact their local health care centre, and inform:

- decade@iqs.url.edu for IQS School of Management students.
- deq@iqs.url.edu for IQS School of Engineering students.
- rrhh@iqs.url.edu for any other person in the educational community.

Dean's offices and the Human Resources department must notify cases of symptoms to the Occupational Risk Prevention manager, eduard.serra@iqs.edu

If a person is diagnosed with Covid-19 by a medical service following their presence on campus, they must notify the following as soon as possible:

- decade@iqs.url.edu for IQS School of Management students.
- deq@iqs.url.edu for IQS School of Engineering students.
- rrhh@iqs.url.edu for any other person in the educational community.

Dean's offices and the Human Resources department must notify cases of symptoms to the Occupational Risk Prevention manager, eduard.serra@iqs.edu

For each case, an evaluation will be made of colleagues who have shared the same space or had contact with one another (classroom group, professors, or administration) and whether they should be isolated from others. In theory, individuals can continue working as per usual prior to diagnosis if the established safety and hygiene measures have been maintained, subject to a case-by-case decision.

If a second confirmed case occurs in the same classroom group or department, all members in the group will be confined.

Any new instructions received from health authorities must be followed.

Dr Eduard Serra Hosta
Head of Safety and Director of Emergencies at IQS.
